

**MAY, 2010**

**VOL. V No. II**

## KSWebIZ Totals:

(April 30, 2010)

Number of Patients: **1,725,038**

Number of Vaccinations: **13,614,832**

Administered Vaccines: **1,480,130**

## 2010 Token Renewal

Clinics that have tokens expiring in July should have received information on how to renew the tokens. If you are a user that has a token expiring but has not received information on how to renew your token, please contact the KSWebIZ helpdesk at 877-296-0464.

## REMINDER:

- ◆ Security Tokens should never be shared.
- ◆ RSA will automatically log a user off after 30 minutes of inactivity.
- ◆ If an employee is no longer employed, please contact the helpdesk to have the token disabled or transferred immediately. Tokens can be transferred or purchased new.

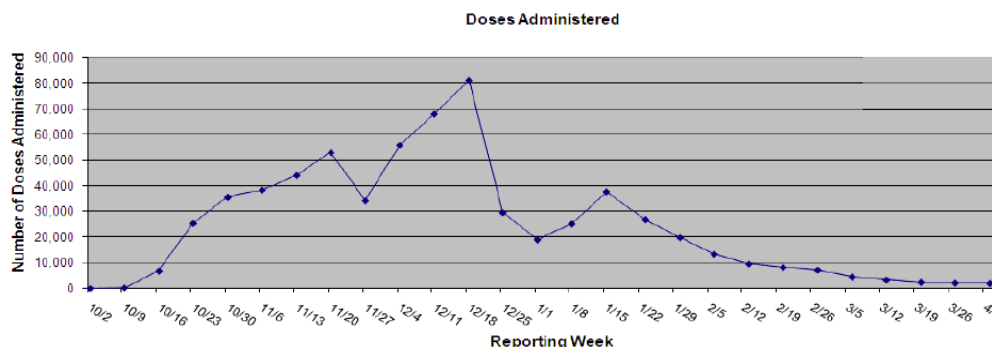

## Calendar of Events

School Nurse Conference	July 20-21, 2010—Wichita
Kansas Immunization	October 27-29, 2010-Wichita

# Thank You Kansas H1N1 Providers!

The Kansas Immunization Program and KSWebIZ/CRA staff would like to extend an honorable thank you to those providers that participated in the H1N1 campaign and dedicated themselves to keeping Kansans healthy. Over 650,000 H1N1 vaccinations were given and recorded by providers in Kansas. In comparison, in 2008 only 55,000 doses of influenza vaccine were distributed by the KIP. Through dedicated action, the population thwarted further spread of disease by the providers' willingness to vaccinate. Lives were saved.

In April of 2009 when the first disease incidence was recorded, KDHE had a newly developed Countermeasure and Response Administration System which was fully operational, but had never been tested in an exercise or live event. Slight modifications had to be made that would allow for expedited mass data entry point and aggregate reporting capability. The Local Health Department's (LHD's) reported at the patient level using a modified mass vaccination quick add screen and private providers reported totals using a newly developed reporting screen. All reports had to be submitted in a timely and accurate fashion so that numbers could be submitted to CDC weekly.

All providers were required to pre-register electronically. The LHD's then approved providers in their county and sent signed provider agreements to KDHE. KDHE trained H1N1 providers on how to report on the KS-CRA system via Webinars. In the end, a total of 1712 providers pre-registered and there were 1118 providers approved by the LHD's.

## School Module Trainings Continue— Numbers Increase!

School Module roll-out continues and the amount of data being added into and obtained from KSWebIZ is booming! Recent numbers indicate that over 21,000 children have been associated to their school and district and over 140,000 vaccinations have been added into the system. Registry staff have been holding regional trainings and bringing on multiple districts at a time. The next large training is scheduled in Wichita this July at the School Nurse Conference. Additionally, online trainings for the school module should begin this fall. If you would like to learn more information about the KSWebIZ school module, please contact the helpdesk.

Continued from page 1

Of the providers, a total of 2,671 users were given access the system for reporting purposes.

KDHE sent weekly vaccine allocation amounts to the health departments, the LHD's received and approved vaccine orders. The orders were then processed by KDHE staff and entered into the vaccine ordering system through CDC, called VACMAN, to be filled.

When vaccine was shipped, doses were entered by KDHE staff and transferred in KS-CRA so that the providers could receive the vaccine into their inventory. As of April 3, 2010 73.6% of doses distributed were administered and over 200,000 were given to children in the 5-18 year category. Administration of doses spiked in December with another surge in January.

KS-CRA allowed users to access the current patient demographics and immunization history in KSWebIZ. The system also allowed for easy response to vaccine recalls and identified providers with expiring vaccines. KSWebIZ staff could track vaccination transfers within the system and the system allowed for quick reporting. Additionally, KSWebIZ increased in patient numbers with an increase of ~200,000 patients and an increase of ~1.3 million vaccinations since September 2009.

The experience of the H1N1 campaign has given KDHE staff and providers the experience in mass vaccination during a pandemic response. This will help in future campaigns and define gaps that will be filled in future responses. Thank you Kansas providers and LHD's for the work that you've done to protect the citizens of Kansas! Kansas was also highlighted in an article regarding [H1N1 communication to the public](#).

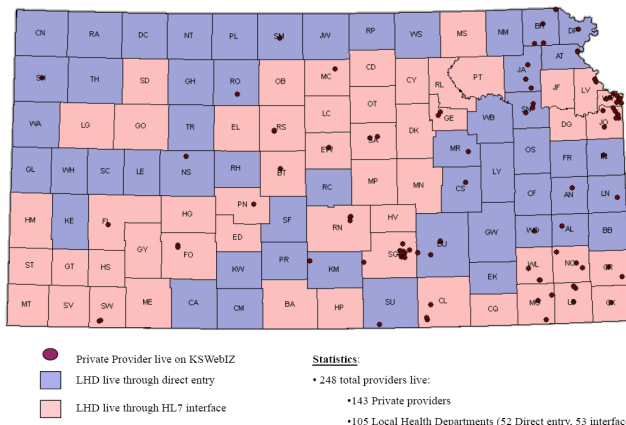

## Want to Access KSWebIZ?

The Kansas Immunization Registry—KSWebIZ is a birth to death immunization database that houses vaccinations on Kansas residents or those immunized in the state. Two hundred and forty three provider sites in Kansas access the registry, which include all 105 health departments. KSWebIZ has the capability to interface with provider's current electronic medical records systems. Registry staff are actively working with several vendors to develop interfaces. If a provider is interested in directly entering data into the registry, KSWebIZ offers inventory management, vaccine forecaster (based off of current ACIP schedules), and many reports. Some of the reports available to direct-entry providers include patient reminder/recall, immunization rates reports, dosage reports just to name a few.

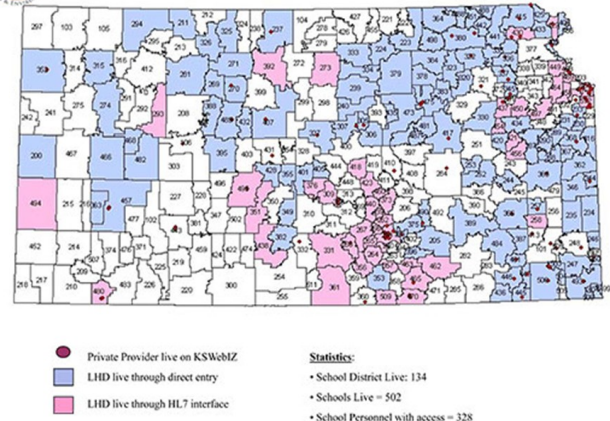

Although Vaccines for Children (VFC) providers will receive priority to enroll with KSWebIZ, the enrollment of non-VFC providers is now available. In order to register to become a KSWebIZ provider please click on the [provider questionnaire](#) link and return it to the KSWebIZ helpdesk so that we can have a staff member contact you for training dates/times or additional questions. The KSWebIZ helpdesk fax is 785-291-3142 or by mail. If you have further questions regarding what the KS Immunization Registry (KSWebIZ) has to offer, please call the helpdesk 877-296-0464.

KSWebIZ Providers as of April 30, 2010

KSWebIZ Schools live as of April 30, 2010

## Upcoming Trainings

**New User Call:** June 11, 2010 (12-1pm)  
July 9, 2010 (12-1pm)

**Reconciliation Training:** June 4, 2010 (12-1pm)  
July 2, 2010 (12-1pm)

Please watch for announcements and details

KSWebIZ staff are continuing monthly and quarterly conference calls (via go-to-meeting) for users who are NEW to KSWebIZ and quarterly calls for all KSWebIZ direct entry users. If you have staff that just received a new or transfer token and need to be brought up to speed, this one hour introduction course will teach users the basics of KSWebIZ.
